

Test Execution & Bug Reporting

3.1 Manual Test Execution

3.1.1 Confusing Email Sign-Up / Sign-In Flow

- **Test Area:** Sign-up / Sign-in page navigation
- **Preconditions:** User is on the Sign-up page
- **Test Steps:**
 1. On the Sign-up page, observe available buttons: “Sign up with Google”, “Sign up with GitHub”, “Sign in with Email”.
 2. Click “Sign in with Email”, redirected to the Sign-in with Email page.
 3. On the Sign-in page, click “Sign up”, which redirects to the Sign-up with Email page.
- **Expected Result:** Direct **Sign-up with Email** button should navigate the user straight to the Sign-up with Email page.
- **Actual Result:** User must click multiple steps to reach the Sign-up with Email page, the flow is not intuitive.
- **Observation:** Navigation is unnecessarily complex for new users.
- **Screenshots / Evidence:**

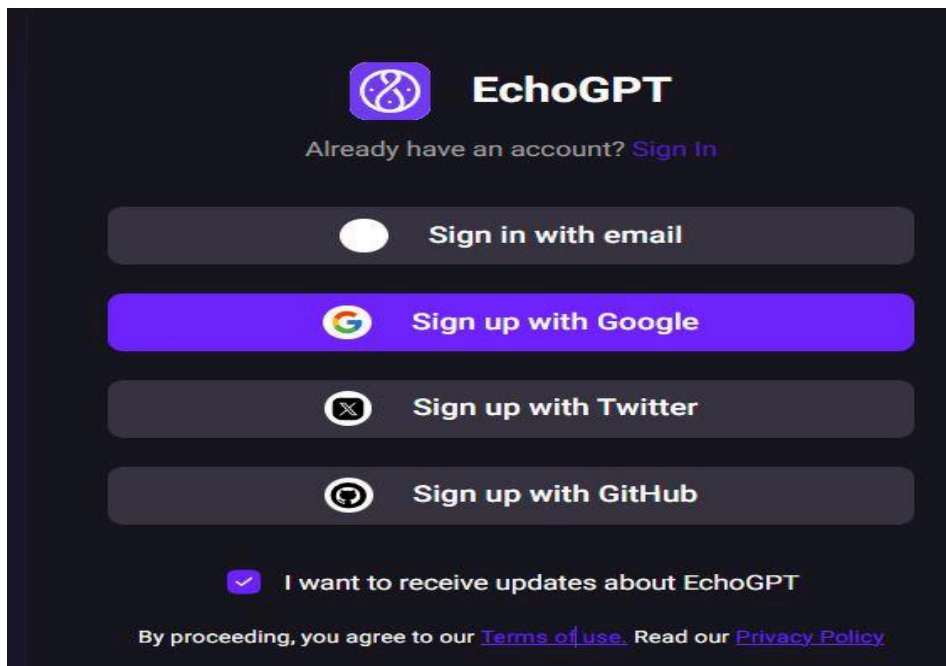

Image 3.1.1.1: Sign-up page

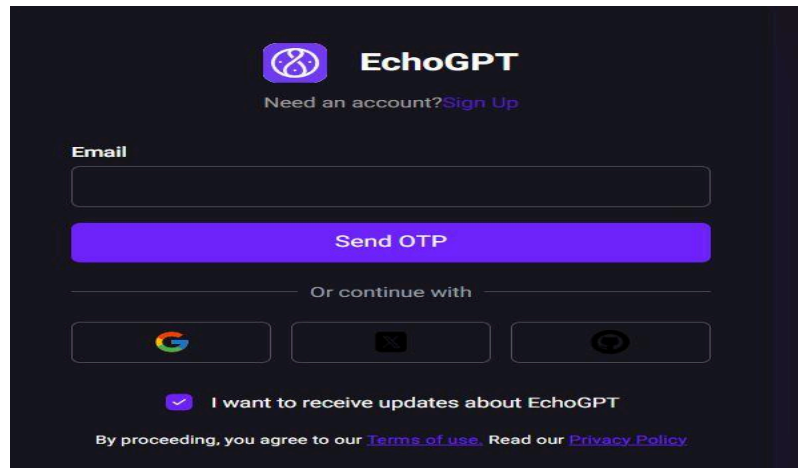

Image 3.1.1.2: Sign-in page after clicking “Sign in with Email”

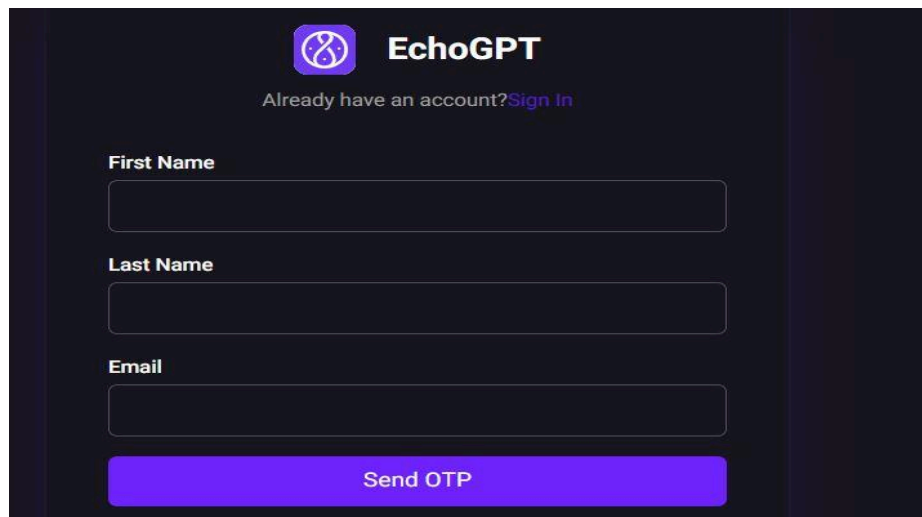

Image 3.1.1.3: Sign-up page after clicking “Sign up”

- **Recommendation:** Add a direct “Sign up with Email” button for simpler, intuitive navigation.

3.1.2 Button Visibility / Color Contrast Issue

- **Test Area:** Sign-up page -> Social sign-up buttons.
- **Preconditions:** User is on the Sign-up page, dark mode enabled
- **Test Steps:**
 1. Open the Sign-up page in dark mode. Google”, “Sign up with GitHub”, “Sign in with Email”.
 2. Observe the visibility of the **Twitter** and **GitHub** sign-up buttons.
 3. Verify buttons are clickable

- **Expected Result:** Buttons clearly visible and easily identifiable.
- **Actual Result:** Buttons are hard to see due to low contrast, though functionality works.
- **Observation:** Poor visibility may affect usability and accessibility.
- **Screenshots / Evidence:**

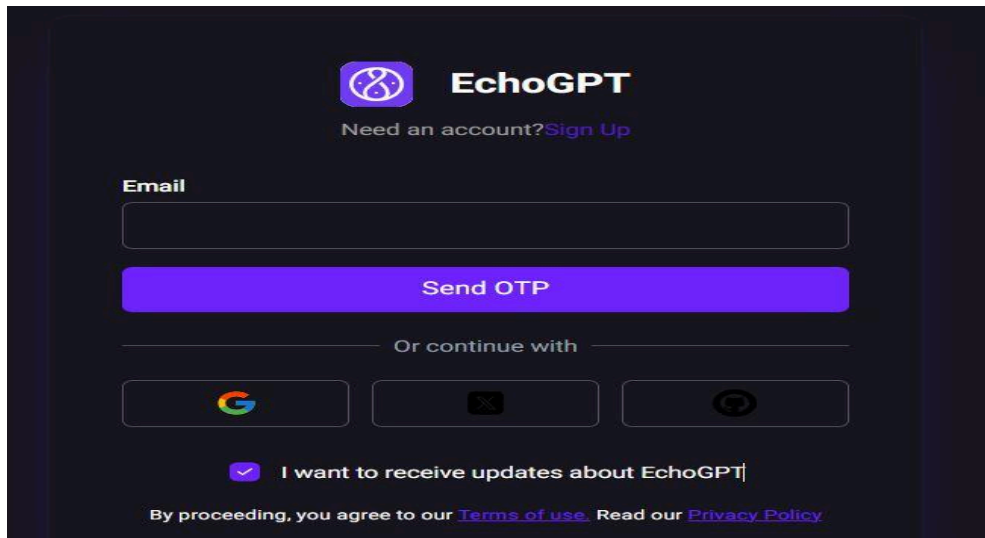

Image 3.1.2.1: Sign-up page after clicking “Sign up”

- **Recommendation:** Improve the color contrast of social buttons for better accessibility.

3.1.3 Wrong OTP Verification

- **Test Area:** OTP Verification – Sign-in / Sign-up
- **Preconditions:** OTP sent to registered email
- **Test Steps:**
 1. Enter the wrong OTP on the verification page.
 2. Click Send OTP.
- **Expected Result:** Display “Invalid OTP” message; user stays on OTP page and is not logged in.
- **Actual Result:** User is redirected to the homepage without login; no error message is shown.
- **Observation:** System does not properly handle wrong OTP; may confuse users.
- **Screenshots / Evidence:**

Image 3.1.3.1: Send OTP in the given email

Image 3.1.3.2: Enter wrong OTP

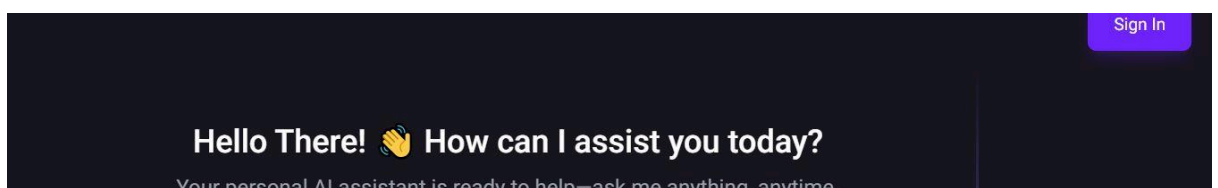

Image 3.1.3.3: Redirected to homepage without login

- **Recommendation:** Display a proper “Invalid OTP” message and prevent redirection to the homepage on failure.

3.1.4 Sign in with Non-Registered Email

- **Test Area:** Sign-in functionality → Email OTP
- **Preconditions:** User is on the sign-in page
- **Test Steps:**

1. Enter an email that is not registered.
 2. Click "Send OTP."
- **Expected Result:** Display a clear error message like "Email not registered"; user should remain on the sign-in page; no OTP sent.
 - **Actual Result:** User is redirected to the OTP page; no OTP is sent and no error message is shown.
 - **Observation:** The System prevents login but does not inform the user about the unregistered email, which can confuse users.
 - **Screenshots / Evidence:**

Image 3.1.4.1: Enter a non-registered email

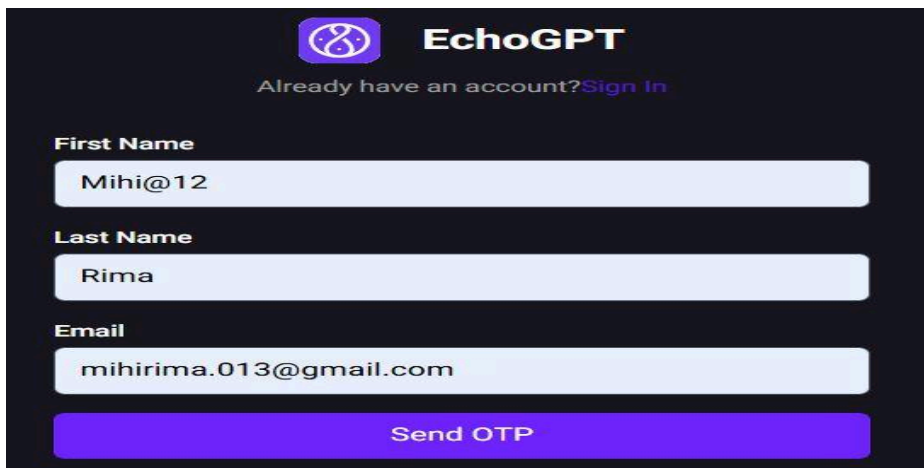

Image 3.1.4.2: Show OTP screen

- **Recommendation:** Display a proper error message for non-registered emails and prevent redirect to the OTP page.

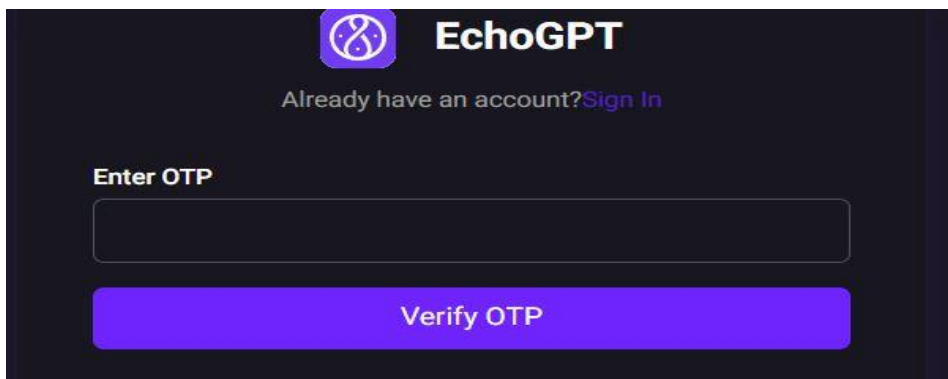

3.1.5 Sign Up with Already Registered Email

- **Test Area:** Sign-up functionality → Email OTP
- **Preconditions:** User is on the sign-up page.
- **Test Steps:**
 1. Enter an email that is already registered.
 2. Click "Send OTP."
- **Expected Result:** Display a clear error message like "Email already registered"; user should remain on the sign-up page; no OTP sent.
- **Actual Result:** User is redirected to the OTP page; no OTP is sent, and no error message is displayed.
- **Observation:** Account duplication is blocked functionally, but lack of an error message affects user experience
- **Screenshots / Evidence:**

The screenshot shows the EchoGPT sign-up interface. At the top, there is a logo and the text "EchoGPT". Below it, a link "Already have an account? Sign In" is visible. The form consists of three input fields: "First Name" with the value "Mihi@12", "Last Name" with the value "Rima", and "Email" with the value "mihirima.013@gmail.com". A blue button labeled "Send OTP" is positioned below the email field.

Image 3.1.5.1: Try to register with a registered email

The screenshot shows the EchoGPT OTP verification interface. At the top, there is a logo and the text "EchoGPT". Below it, a link "Already have an account? Sign In" is visible. The form consists of a single input field labeled "Enter OTP" and a blue button labeled "Verify OTP" positioned below it.

Image 3.1.5.2: No error message is displayed

- **Recommendation:** Show a proper “Email already registered” message and prevent redirect to OTP page.

3.2 Bug Reports

Bug Report 1

- **Bug ID:** ECHO-AUTH-001
- **Title:** Session persists when switching email accounts.
- **Severity:** High
- **Priority:** High
- **Steps to Reproduce:**
 1. Sign in with mihirima.013@gmail.com.
 2. Manually navigate to **<https://echogpt.live/login>**.
 3. Sign in with another email account sumaiyameem.cse6.bu@gmail.com and enter the correct OTP
 4. After redirect, use the browser back button to navigate.
- **Expected Result:** The Previous session (mihi@gmail.com) should be terminated. Only meem@gmail.com should remain logged in.
- **Actual Result:** Previous session (mihi@gmail.com) persists and can be accessed via the browser back button. Both sessions appear active.
- **Environment/Browser Information:**
 - OS: Windows 10
 - Browser: Chrome v139
 - URL: **<https://echogpt.live>**
- **Screenshots/Videos:**

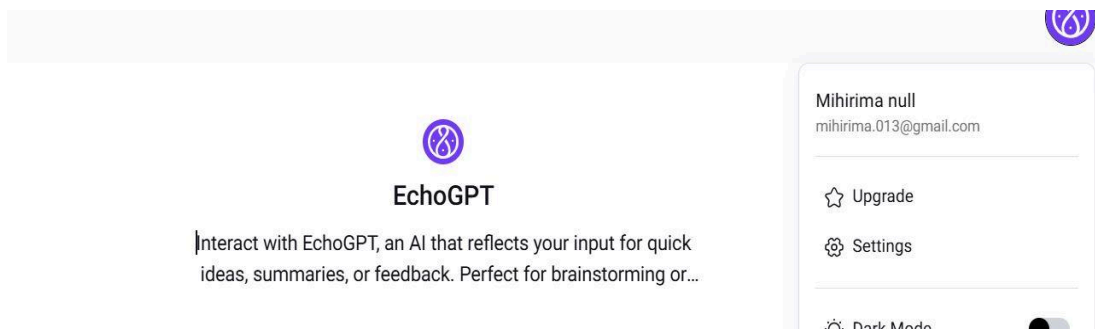

Figure: Image1

The image shows the EchoGPT login and signup interface. At the top, there is a purple logo with a stylized 'E' and the text 'EchoGPT'. Below the logo, it says 'Need an account? Sign Up'. The main section is for email login/signup. It has a label 'Email' above a text input field containing 'sumaiyameem.cse6.bu@gmail.com'. Below the input field is a large purple button labeled 'Send OTP'. Underneath this is a section 'Or continue with' with three buttons: Google, Apple, and GitHub. At the bottom, there is a checkbox with a purple checkmark and the text 'I want to receive updates about EchoGPT'. Below that, it says 'By proceeding, you agree to our Terms of use. Read our Privacy Policy.'

Figure: Image3

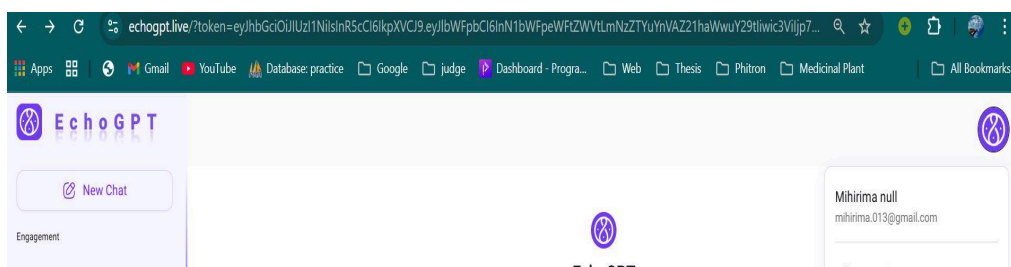

Figure: Image4

- **Workarounds:** User must clear browser cookies or log out before switching accounts.

Bug Report 2

- **Bug ID:** ECHO-AUTH-002
- **Title:** Session persists when switching Google accounts.
- **Severity :** High
- **Priority:** High
- **Steps to Reproduce:**
 1. Sign in with Google account mihirima.013@gmail.com redirected to homepage.
 2. Manually edit the URL to **https://echogpt.live/login**, login page appears.
 3. Sign in with another Google account sumaiyameem.cse6.bu@gmail.com
- **Expected Result:** Previous session (mihirima.013@gmail.com) should be logged out, and only sumaiyameem.cse6.bu@gmail.com should be active.
- **Actual Result:** Homepage shows the first account (mihirima.013@gmail.com), the session for sumaiyameem.cse6.bu@gmail.com is not properly reflected.
- **Environment/Browser Information:**
 - OS: Windows 10
 - Browser: Chrome v139
 - URL: **https://echogpt.live**
- **Screenshots/Videos:**

- **Workarounds:** Manually log out before signing in with another account.

Bug Report 3

- **Bug ID:** ECHO-AUTH-003
- **Title:** An authenticated user can access the login page by typing the login URL; the system does not redirect or warn.
- **Severity:** High
- **Priority:** High
- **Steps to Reproduce:**
 1. Sign in to any account mihirima.013@gmail.com redirected to the homepage.
 2. Manually type **https://echogpt.live/login** in the browser address bar and press Enter.
 3. Observe the page displayed.
- **Expected Result:** System should detect active session. User should be redirected to the homepage automatically, or a message should prompt: "You are already logged in. Please log out first to access the login page."
- **Actual Result:** The Login page is displayed even though the user is already logged in. No warning or redirect occurs; the session remains active.
- **Environment/Browser Information:**
 - OS: Windows 10
 - Browser: Chrome v139
 - URL: **https://echogpt.live**
- **Screenshots/Videos:**

Figure: Image2

- **Workarounds:** User must manually navigate to the homepage or log out before accessing the login page.

3.3 Test Execution Report

3.3.1 Test Metrics & Statistics

| Metric | Count | Percentage |
|---------------------------|-------|------------|
| Total Test Cases Planned | 31 | 100% |
| Total Test Cases Executed | 30 | 96.8% |
| Test Cases Not Executed | 1 | 3.2% |
| Test Cases Passed | 28 | 90.3% |
| Test Cases Failed | 2 | 6.5% |

3.3.2 Execution Status:

- Passed: 28
- Failed: 2
- Not Executed: 1

3.3.2 Defect Analysis

A total of 3 defects were identified, all with High & Medium severity.

Defects Categorized by Severity

| Severity | Test Case ID | Title |
|----------|--------------|---|
| High | TC-NF-001 | Session persistence after manual URL navigation |
| High | TC-NF-002 | Session switching without logout |
| Low | TC-NF-011 | Accessibility - Color contrast |

3.3.3 Overall Quality Assessment

The application's core functionality is strong, with all primary sign-up and OTP verification features working correctly. However, quality is severely compromised by a critical security flaw in session management and a failure in accessibility compliance.

3.3.4 Recommendations for Improvement

- 1. Immediate Security Fix:** Halt the release and fix the session management. The system must force a logout of previous sessions before starting new logins.
- 2. Quick UI Fix:** Adjust the color contrast on the dark mode buttons to meet accessibility standards (WCAG).
- 3. Performance Test:** Complete the load test (TC-NF-006) before final release to ensure stability under pressure.
- 4. Improve User Feedback:** Ensure proper error messages are displayed consistently to guide users through failures.
